U.S. Immigration and Customs Enforcement (ICE
Detainee Death Report: SALEH, Hasan Ali Moh'd

General Demographic/Background Information

- **Date of Birth:** March 12, 1958
- **Date of Death:** October 11, 2025
- **Age:** 67
- **Sex:** Male
- **Country of Citizenship:** Jordan

Immigration History

On March 8, 1994, the U.S. Immigration and Naturalization Service (INS) admitted Mr. SALEH to the United States at Miami, FL as a nonimmigrant visitor for pleasure, with authorization to remain in the country for six months.

On March 5, 2019, U.S. Immigration and Customs Enforcement (ICE), Enforcement and Removal Operations (ERO) New Orleans encountered Mr. SALEH at Adams County Correctional Facility in Natchez, MS, subsequent to his conviction and issued him a Notice to Appear (NTA), pursuant to the Immigration and Nationality Act (INA) for Attempt or Conspiracy to Commit Fraud, Deceit or Revenue Loss to the Government, and Conviction of Two Crimes Involving Moral Turpitude.

On September 12, 2019, the U.S. Bureau of Prisons (BOP) transferred custody of Mr. SALEH to the custody of ERO New Orleans.

On September 17, 2019, ERO issued Mr. SALEH a revised NTA, pursuant to the INA for Attempt or Conspiracy to Commit an Offense Described, Fraud, Deceit or Revenue Loss to the Government, and Conviction of Two Crimes Involving Moral Turpitude.

On September 19, 2019, ERO New Orleans detained Mr. SALEH at Central Louisiana ICE Processing Center (CLIPC), in Jena, LA.

On June 9, 2020, ERO New Orleans released Mr. SALEH on an Order of Supervision (OSUP), with in-person reporting requirements, under the Alternative to Detention program (ATD).

On September 14, 2025, ERO Miami arrested Mr. SALEH in Pompano Beach, FL and detained him at Krome Service Processing Center (KSPC), in Miami, Florida (FL).

Criminal History

On July 5, 1994, the 17th Judicial Circuit in Broward County, Fort Lauderdale, Florida, convicted Mr. SALEH for welfare fraud, and sentenced him to a six-month probation.

On March 20, 2018, the U.S. District Court for the Southern District of Florida convicted Mr. SALEH of conspiracy to commit offenses against the United States, food stamp and wire fraud, and sentenced Mr. SALEH to 24 months of confinement.

Synopsis of Events

On September 14, 2025, a registered nurse (RN) completed Mr. SALEH's medical intake screening and documented his history of hypertension (HTN), blood clot, diabetes (DM), chronic kidney disease (CKD), and coronary artery disease (CAD). The RN noted Mr. SALEH's reported medications and normal vital signs, except for elevated blood pressure and blood glucose readings. At the order of an advance practice provider (APP), Mr. SALEH was admitted to the medical housing unit (MHU) for observation. Fall precautions, sliding scale insulin, and the continuation of his previously prescribed HTN medications and blood thinner were ordered.

On September 15, 2025, an APP completed Mr. SALEH's comprehensive health assessment, documented normal vital signs, except an elevated blood pressure reading, and noted his reported history of HTN; CAD with three open heart surgeries; peripheral arterial disease (PAD) with bilateral leg bypasses; high cholesterol; CKD with a left arm arteriovenous (AV) fistula and a subclavian catheter for his dialysis treatment; and DM with diabetic retinopathy. The APP admitted Mr. SALEH to the MHU with daily nursing assessment, ordered a diabetic and heart healthy diet, and continued medications for his chronic conditions.

- **On the same date**, a physician completed Mr. SALEH's MHU evaluation, documented normal vital signs, painful extremities with activity, and a grade three systolic murmur on the right sternal border, referred Mr. SALEH to a nephrologist for dialysis and a vascular surgeon for his PAD, discontinued some medications, and ordered routine labs.

On September 17, 2025, a physician completed Mr. SALEH's daily MHU rounds, documented a normal exam, and ordered additional labs and medications.

- **On the same date**, Mr. SALEH started dialysis three days a week via his subclavian catheter. Between September 24 and October 8, 2025, Mr. SALEH received dialysis treatment three days a week.

On September 19, 2025, a physician discussed with Mr. SALEH his abnormal kidney enzyme levels and documented he complained of leg cramps. The physician informed Mr. SALEH of his pending vascular surgeon referral, and instructed him to reduce his dietary sodium intake, maintain supervised exercise, and continue his anticoagulant therapy and dialysis treatment three

times a week.

On September 23, 2025, a physician referred Mr. SALEH to an off-site radiologist for an ultrasound to assess the maturity of his AV fistula, which was surgically placed in June 2025.

On October 6, 2025, KSPC RN completed Mr. SALEH's assessment following his offsite nephrology consultation, documented normal vital signs, and notified an APP.

On October 7, 2025, an APP noted Mr. SALEH's nephrology recommendation for a three-month follow-up appointment with labs.

On October 9, 2025, a physician evaluated Mr. SALEH in MHU, documented he remained stable and noted Mr. SALEH's complaints regarding dialysis treatment, and constipation. To address the constipation, the physician ordered medication.

On October 10, 2025, **at approximately 1:50 a.m.**, an RN evaluated Mr. SALEH after he reportedly vomited and noted that his last bowel movement was four days prior. The RN documented an elevated body temperature and consulted with an APP, who ordered medication to treat the fever and instructed the RN to recheck his temperature in 60 minutes. The APP also directed continuous monitoring of Mr. SALEH and ordered the administration of additional medications if vomiting persisted.

- **Between 3:08 and 6:30 a.m.**, an RN documented Mr. SALEH's repeat temperature readings, which were normal, and observed him sleeping.
- **At approximately 7:40 a.m.**, an RN assessed Mr. SALEH, noting his complaints of malaise, nausea, and vomiting. The RN documented an elevated temperature reading while his other vital signs remained normal. A higher-level provider was notified of Mr. SALEH's status, and fever medication was administered as per the physician's orders.
- **At approximately 8:00 a.m.**, an APP evaluated Mr. SALEH, noted his medical history and report of dizziness, nausea, vomiting, fever, and chills, documented a soft abdomen with positive bowel sounds, and referred Mr. SALEH to the Larkin Community Hospital (LCH) emergency room (ER), via ambulance, for further evaluation.
- **At approximately 2:53 p.m.**, an LCH ER physician diagnosed Mr. SALEH with pulmonary edema and infection of the blood stream associated with his dialysis catheter, noting his worsening condition prompted initiation of intravenous antibiotics and blood cultures analysis, and admitted him to the medical surgical unit for continued in-patient management by a nephrologist, cardiologist, infectious disease specialist, and a general surgeon.

On October 11, 2025, an LCH ER physician documented, despite intensive management, Mr. SALEH developed worsening respiratory symptoms, including shortness of breath and cough with blood, leading to rapid deterioration.

- **At approximately 6:30 p.m.**, an LCH physician documented hospital staff activated a medical emergency and initiated life-saving measures after Mr. SALEH became unresponsive and pulseless.

- **At approximately 7:13 p.m.**, a physician declared Mr. SALEH deceased.
